

Hegrecat® TA102

General Description

Hegrecat TA102 catalyst is a tertiary amine containing 33% triethylenediamine (TEDA) in 67% ethylene glycol. It is a strong urethane (polyol-isocyanate) catalyst that is commonly used for shoe soles.

Product Property

- Strong gelation catalysis
- Convenient liquid form with MEG as carrier

Applications

Hegrecat TA102 catalyst is intended for use in any polyurethane formulation extended with monoethylene glycol (MEG), it also recommended for integral skin applications.

Typical Physical Property

Appearance:	Amber liquid
Flash Point, °C (PMCC)	105
Viscosity at 25°C	60
Specific Gravity at 25°C [g/cm]	1.09
Water Solubility	Soluble
Calculated OH number [mgKOH/g]	1,207

Storage and package Information

HeJia Chemical recommends that our catalysts be stored in a dry and cool area under appropriate ventilation conditions. Each container should be closed tightly to avoid contamination with moisture or other negative influences, which could change the products' performance in the end use. 200kgs per steel drum/ 25kgs per plastic drum.

Shelf Life

36 months from the date of production
